

POWERVAR® ABC100-11 Power Conditioner

POWERVAR® Power Conditioners provide protection to your sensitive equipment from the biggest problem for today's computers—variations in power quality. A power conditioner provides protection against these changes by providing a clean source of power. POWERVAR Power Conditioners achieve this clean source of power through the use of a low impedance isolation transformer with a ground neutral bond, a surge diverter and a power line filter; components not found in low end surge protectors. Use them in conjunction with a UPS (Uninterruptible Power Supply) battery backup ensures your serving line computers get the power protection they need.

FEATURES AND BENEFITS

- Helps prevent hardware failure and data loss due to electrical noise
- Red flashing LED warns if the AC outlet is missing its input safety ground
- Large 1.0 amp capacity to manage power demanding electronics

technical specifications

CATEGORY	DESCRIPTION
VA Rating	120
Output Current	1.0 amps
Input Voltage	120
Output Voltage	120
Number of Outlets	2
Compliance	UL, cUL, RoHS
Noise Output Voltage	<10.0 volts L - N, <0.5 volt N - G

Dimensions

Length 6.74"
Height 3.61"
Width 4.25"

Weight

Shipping 6 lbs.
